

8.4 Vehicle age limits

The frequency of testing required (see [frequency of vehicle tests](#)) to ensure the ongoing safety of vehicles is a separate issue to the setting of maximum age limits at first licensing, or maximum age limits beyond which an authority will not licence a vehicle.

The setting of an arbitrary age limit may be inappropriate, counterproductive and result in higher costs to the trade and ultimately passengers. For example, a maximum age for first licensing may have adverse unintended consequences. A 5-year-old used electric vehicle will produce less emissions than a new Euro 6 diesel or petrol car – enabling the trade to make use of previously owned vehicles will assist it to transition more rapidly to zero emission vehicles and improve air quality.

Licensing authorities should not impose age limits for the licensing of vehicles instead they should consider more targeted requirements to meet their policy objectives on emissions, safety rating and increasing wheelchair accessible provision where this is low.
